

CARMIGNAC CHINA NEW ECONOMY A EUR ACC

FRENCH MUTUAL FUND (FCP)

Recommended
minimum investment
horizon:

FR001400R3Z5

Monthly Factsheet - 30/05/2025

INVESTMENT OBJECTIVE

Carmignac China New Economy is an equity fund looking to seize investment opportunities arising mainly, but not exclusively, from China's New Economy. The latter offers numerous sustainable growth themes in areas such as healthcare, education, clean energy, technological innovation and "sustainable" consumption, including e-commerce and Internet which benefit from the increasing purchasing power and improving living standards of Chinese households. Stock selection is the Fund's main performance driver and is based on rigorous financial and extra-financial analysis. Its objective is to outperform its reference indicator over at least 5 years. The Fund also looks to minimise its environmental impact by reducing its carbon footprint by 5% annually.

Fund management analysis can be found on P.3

PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

FUND PERFORMANCE VS. REFERENCE INDICATOR SINCE LAUNCH (Basis 100 - Net of fees)

European regulation requires a minimum one-year share performance to be displayed.

CUMULATIVE AND ANNUALIZED PERFORMANCE (as of 30/05/2025 - Net of fees)

European regulation requires a minimum one-year share performance to be displayed.

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- This month, Chinese markets rose (Hang Seng +4.3%, CSI 300 +2.9%), in line with the main emerging market indices.
- After a very turbulent April due to Donald Trump's tariffs, the US president held numerous talks with his trading partners, revised certain tariffs downwards and/or postponed them, leading to a rebound in the markets.
- In China, economic indicators declined, with the Caixin manufacturing PMI coming in at 50.4 for April and the services PMI at 50.7.
- On the consumption front, retail sales slowed in April, falling from +5.9% to +5.1%.

PERFORMANCE COMMENTARY

- The fund posted an excellent performance this month, significantly outperforming its reference indicator.
- Our portfolio of Taiwanese technology stocks benefited greatly from the strategy. In this regard, we can mention TSMC, Elite Material, and Wiwynn.
- In China, consumer discretionary stocks such as Tencent and Gaotu Techedu also saw their share prices rise over the period.

OUTLOOK AND INVESTMENT STRATEGY

- We remain constructive on China, given the shift in perception. Markets recognize that geopolitical tensions are hurting China but will not bring it to its knees.
- Furthermore, technological advances, particularly in AI and productivity, should provide further stimulus to the economy.
- However, in the short term, we are maintaining a cautious stance due to uncertainties surrounding the tariffs imposed by the Trump administration, their impact on the Chinese economy and uncertainties surrounding government support measures. In response to US protectionist measures, the Chinese government appears determined to protect its interests and implement restrictive measures in retaliation for the tariff sanctions.
- At present, although the Chinese government's announcements do not appear sufficient in themselves to revive the country's economy, this is a major turning point, as President Xi Jinping has shown that he now places Chinese consumers, innovation and technological progress at the heart of his priorities.
- We are closely monitoring each of our Chinese positions and their valuation, with the aim of remaining disciplined in the calibration of our positions. Over the month, we reduced our position in Tuya and increased our exposure to Contemporary Amperex.

PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- Equity investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers;
- Carbon intensity reduction by 5% per year, to contribute to China's carbon neutrality goal for 2060 (base rate 530.2 tCo2e/€mm revenues as of 31.12.2021).

CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: MSCI, 30/05/2025. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emissions figures are based on MSCI data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO2 is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Active share: Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

FCP: Fonds commun de placement (French common fund).

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

MSCI methodology: MSCI uses company disclosed emissions where available. In the instance these are not available, they use their proprietary model to estimate emissions. The model has three distinct modules, production model (used for power-generating utilities), company-specific intensity model (used for companies that have reported carbon emissions data in the past but not for all years), & industry segment-specific intensity model (used for companies that have not reported any carbon emissions data in the past). For further information, please visit MSCI's latest "Climate Change Metrics Methodology" document.

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

EMERGING MARKETS: Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **LIQUIDITY RISK:** The Fund may hold securities with reduced market exchange volumes and which may, in certain circumstances, be relatively illiquid. The Fund is therefore exposed to the risk that it may not be possible to liquidate a position in the desired time frame and at the desired price.

The Fund presents a risk of loss of capital.
