INVESTMENT OBJECTIVE

Carmignac Credit Opportunities is an alternative (AIF) fund capturing opportunities on global credit markets. Its strategy combines a relative-value approach with fundamentally-driven discretionary selection of corporate debt and securitisation instruments, aiming to construct an attractive allocation across geographies, sectors and asset classes. The Fund seeks to achieve capital growth over a recommended investment horizon of three years.

Fund management analysis can be found on P.3

PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor). The Fund presents a risk of loss of capital.

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- August was characterized by a relatively calm environment for European credit markets, despite continued volatility in government bonds.
- Primary activity remained subdued for most of the month before rebounding towards month-end.

PERFORMANCE COMMENTARY

- The fund posted a positive performance over the period, benefiting from our high yield idiosyncratic stories.
- We have benefited from our investments in the financial and real estate sectors.
- Note that, our structured credit (c.8% of our assets at the end of August) bucket continue to perform positively over the period.

OUTLOOK AND INVESTMENT STRATEGY

- Given the limited risk-reward currently available in credit markets, we continue to adopt a defensive stance.
- Our historically low level of exposure in structured credit should enable us to seize attractive opportunities in the CLO segment, which we expect to materialize on the back of increasing dispersion and reassessment of credit margins.
- Other large allocations include financials and issuers in the natural resources space.
- The bond portfolio yield is now close to 7%, with an average rating of BB.
- The portfolio remains unlevered, conservatively positioned, while preserving significant dry powder to capitalize on future dislocations.

GLOSSARY

ESG data, ratings and portfolio indicators are provided for information purposes and should not be understood as a guarantee of investment performance or of any specific sustainability outcome.

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Credit cycle: A credit cycle describes the different phases of access to credit by borrowers. It alternates between periods of easily accessible funds to borrow due to low interest rates and periods of contraction where lending rules are more restrictive and interest rates are higher.

Forward financial instruments: A forward contract is a customized contract between two parties to buy or sell an asset at a specified price on a future date. A forward contract can be used for hedging or speculation, although its non-standardized nature makes it particularly apt for hedging. Unlike standard futures contracts, a forward contract can be customized to any commodity, amount and delivery date. A forward contract settlement can occur on a cash or delivery basis.

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Non-benchmarked: Portfolio construction is a result of Fund manager views and market analysis with no bias to any benchmark.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM's within the portfolio.

MAIN RISKS OF THE FUND

CREDIT: Credit risk is the risk that the issuer may default. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **LIQUIDITY:** Temporary market distortions may have an impact on the pricing conditions under which the Fund might be caused to liquidate, initiate or modify its positions. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.

Please refer to the Fund's prospectus to view the exhaustive list of risks.
