

CARMIGNAC PORTFOLIO FLEXIBLE BOND F EUR QINC

LUXEMBOURG SICAV SUB-FUND

Recommended
minimum investment
horizon:

3 YEARS

LU3060210526

Monthly Factsheet - 31/10/2025

INVESTMENT OBJECTIVE

Carmignac Portfolio Flexible Bond is an international fixed income UCITS fund that implements interest rates and credit strategies across the globe while systematically hedging the currency risk. Its flexible and opportunistic style enables the Fund to implement a largely unconstrained, conviction-driven allocation strategy across global bond markets. In addition, the Fund seeks to invest sustainably for long-term growth and implements a socially responsible investment approach. The Fund aims to outperform its reference indicator over three years.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- The economic activity seems well oriented in the United States with leading indicators that continue to hover in expansion territory. Despite the shutdown that prevented the publication of certain economic data, inflation at the end of September showed a sign of acceleration again exceeding the 3% threshold on an annual basis.
- The Federal Reserve delivered a 25-bps rate cut, but Jerome Powell struck a cautious tone on the policy outlook, as FOMC members appeared increasingly divided on the path forward amid persistent inflation and resilient economic activity.
- In the euro area, activity indicators improved, with both the composite and services PMIs moving back into expansion territory, supported by a rebound in Germany while Q3 GDP grew by +0.2%, slightly above expectations.
- The ECB for its part maintained a status quo on its monetary policy given an inflation that continues to hover above the target at +2.1% for the headline component and +2.4% for core inflation with no bearish signal for the future.
- The credit markets remained stable in October thanks to an appetite that is still marked by investors, the Itraxx Xover index slightly widened by +4bps. On the other hand, rates were tilted on the downside with German 10-year yield easing by -9bps and US counterpart by -7bps.

PERFORMANCE COMMENTARY

- The fund delivered positive absolute performance in October but underperformed reference index in this bullish interest rate environment.
- Emerging debt has been the best contributor to fund's performance this month benefiting notably from a positive news flow in Argentina.
- On the other hand, our overlay on duration returned negative notably our short positions on long end of both US and euro curves.
- During the month, we increased our overlay on credit indices which now represents 22% of net assets amid high valuation and rising risk on geopolitical and inflation front.

OUTLOOK AND INVESTMENT STRATEGY

- The current environment presents many uncertainties stemming from the decisions of the Trump administration, which could lead to greater volatility in risk assets.
- The market appears pessimistic about economic trajectories in the United States, thus incorporating high expectations for rate cuts. On the other hand, the market is much more optimistic about the growth potential of the Eurozone, with no anticipated cuts from the ECB for the next twelve months.
- The inflationary momentum now seems to be trending upwards on both sides of the Atlantic, while the market continues to forecast a sustained return of inflation below central bank targets.
- Based on these observations, we maintain a negative level of modified duration while keeping a strong appetite for inflation-linked products. On the credit front, we have strengthened overlay on high-yield spectrum in view of current valuation level and potential risk that lie ahead of us.

PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- Corporate bond Investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers.

GLOSSARY

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

The Fund presents a risk of loss of capital.
