Monthly Factsheet - 28/11/2025

INVESTMENT OBJECTIVE

Carmignac Portfolio Credit is an international fixed income UCITS that implements credit strategies across the globe. Its flexible and opportunistic style enables the Fund to implement an unconstrained and conviction-driven allocation. The fund aims to outperform its reference indicator over a minimum recommended investment period of 3 years.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- The end of the longest U.S. government shutdown allowed economic data to be released again, giving investors more visibility. Expectations for a rate cut in December were very volatile. They fell below 50% after hawkish comments and strong increases in services prices, before rising again above 70% at the end of the month following more dovish remarks from the New York Fed President.
- In the United States, recent data showed a mixed picture. Activity in the services sector improved, with the ISM at 52.4, while manufacturing remained in contraction at 48.7. The labor market also sent mixed signals, with job creation above expectations but more announced layoffs and slightly higher unemployment. Consumer spending weakened, with lower retail sales and softer household confidence.
- In the euro zone, the outlook was similarly mixed. GDP for the third quarter was revised up to +1.4%, but industrial production in September disappointed at +0.2%. PMI surveys nonetheless pointed to some improvement in services, especially in France, while headline inflation continued to ease across the region. At the end of the period, sentiment improved thanks to growing hopes for progress in the Ukraine peace talks, which also led to a drop in oil prices.
- Internationally, Japanese inflation stayed above 3% YoY, increasing pressure on the Bank of Japan as a large stimulus plan was announced, which pushed sovereign yields higher. In the UK, the Bank of England kept rates unchanged, and the government's budget was broadly well received, helping gilt yields partially reverse their earlier rise.
- In this context, the US yield curve steepened, with the 2-year and 10-year Treasury yields falling by 8 bps and 6 bps respectively, while German yields moved in the opposite direction, rising by 6 bps on both the 2-year and the 10-year. Credit generally performed well, with the iTraxx Xover tightening by 10 bps to 256 bps, while European IG credit lagged, pressured both by rising rates and a very heavy primary market supply throughout the month.

PERFORMANCE COMMENTARY

- The Fund posted a slightly negative performance on an absolute basis in november but a positive relative performance against its benchmark over the month in an uptrend rate environment in the Eurozone.
- Our rigorous security selection, focused on defensive carry strategies, allows us to continuously outperform credit markets month after month.
- We continue to reinvest the proceeds of inflows in the primary market, which offers compelling opportunities.
- Finally, we maintain an exposure of approximately 7% of the fund's net assets to structured credit (CLOs), which have been performing steadily.

OUTLOOK AND INVESTMENT STRATEGY

- We continue to focus on our core investment themes through a selection of high-yield bonds, including in the energy sector, financial debt and structured credit.
- Given the current level of valuations in credit markets, we are maintaining a high level of credit index coverage, which now accounts for approximately 15% of the Fund's net assets.
- After years of weakness due to abundant liquidity and low capital costs, default rates are expected to return to levels close to historical averages, which we believe should create idiosyncratic opportunities.
- Finally, the portfolio's high carry (around 5.6%) and apparent dispersion within the credit spectrum should mitigate short-term volatility and help generate medium to long-term performance.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Credit cycle: A credit cycle describes the different phases of access to credit by borrowers. It alternates between periods of easily accessible funds to borrow due to low interest rates and periods of contraction where lending rules are more restrictive and interest rates are higher.

Forward financial instruments: A forward contract is a customized contract between two parties to buy or sell an asset at a specified price on a future date. A forward contract can be used for hedging or speculation, although its non-standardized nature makes it particularly apt for hedging. Unlike standard futures contracts, a forward contract can be customized to any commodity, amount and delivery date. A forward contract settlement can occur on a cash or delivery basis.

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Non-benchmarked: Portfolio construction is a result of Fund manager views and market analysis with no bias to any benchmark.

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

UCITS: Undertakings for Collective Investments in Transferable Securities.

UCITS funds are authorised funds that can be sold in any country in the EU. UCITS III regulations allow funds to invest in a wider range of financial instruments, including derivatives.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

CREDIT: Credit risk is the risk that the issuer may default. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **LIQUIDITY:** Temporary market distortions may have an impact on the pricing conditions under which the Fund might be caused to liquidate, initiate or modify its positions. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.
