

CARMIGNAC PORTFOLIO CREDIT E EUR ACC

LUXEMBOURG SICAV SUB-FUND

Recommended minimum investment horizon: **3 YEARS**

LU3003216580

Monthly Factsheet - 30/04/2025

INVESTMENT OBJECTIVE

Carmignac Portfolio Credit is an international fixed income UCITS that implements credit strategies across the globe. Its flexible and opportunistic style enables the Fund to implement an unconstrained and conviction-driven allocation. The fund aims to outperform its reference indicator over a minimum recommended investment period of 3 years.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- April was marked by high volatility and renewed risk aversion on the bond and equity markets. The Trump administration's announcement of new tariffs reignited fears of a recession in the US and disruptions to global production chains.
- Despite Donald Trump's backtracking on the main tariff measures (temporarily reduced to 10%, except for China), a crisis of confidence took hold among investors, who deserted US assets (the dollar and Treasury bonds).
- In the US, the yield curve steepened, with the 2-year rate falling by -28 basis points compared with -5 basis points for the 10-year rate, as the market now anticipates four rate cuts by the Federal Reserve between now and the end of the year.
- The picture was the same in the eurozone, where the German 2-year rate fell by -36 basis points compared with -29 basis points for the 10-year rate, completely erasing the previous month's correction linked to the announcement of investment plans in Germany.
- Risk aversion was high in April following the introduction of tariffs, which led to a +100 bp widening on the Itraxx Xover index at the beginning of the month, before tightening just as sharply after the Trump administration's reversal. As a result, the Itraxx Xover index recorded only a moderate widening of +22bp over the month.

PERFORMANCE COMMENTARY

- The Fund underperformed its benchmark in April, penalized by lower modified duration in an environment of sharply falling yields in the eurozone.
- Despite the surge in volatility in April, we remain confident in the ability of our main investment themes to outperform, such as financial bonds and the energy sector.
- During April, we reduced our exposure to investment grade issuers that had outperformed in order to build up dry powder that can be redeployed on primary market opportunities in the future.
- Finally, we are maintaining exposure to collateralized loan obligations (CLOs), which are performing steadily.

OUTLOOK AND INVESTMENT STRATEGY

- We continue to focus on our core investment themes through a selection of high-yield bonds, energy, financials, and our CLO selection.
- In addition, in this volatile environment, we have benefited from the widening of credit spreads to partially take profits on our market hedging strategies, which now account for 14.8% of the Fund's net assets.
- After years of weakness due to abundant liquidity and low capital costs, default rates are expected to return to more normal levels, which we see as a catalyst for creating real idiosyncratic opportunities.
- Finally, the portfolio's high carry (over 6.6%) and attractive credit valuations should mitigate short-term volatility and help generate medium-term performance.
- to long-term performance.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Credit cycle: A credit cycle describes the different phases of access to credit by borrowers. It alternates between periods of easily accessible funds to borrow due to low interest rates and periods of contraction where lending rules are more restrictive and interest rates are higher.

Forward financial instruments: A forward contract is a customized contract between two parties to buy or sell an asset at a specified price on a future date. A forward contract can be used for hedging or speculation, although its non-standardized nature makes it particularly apt for hedging. Unlike standard futures contracts, a forward contract can be customized to any commodity, amount and delivery date. A forward contract settlement can occur on a cash or delivery basis.

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Non-benchmarked: Portfolio construction is a result of Fund manager views and market analysis with no bias to any benchmark.

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

UCITS: Undertakings for Collective Investments in Transferable Securities.

UCITS funds are authorised funds that can be sold in any country in the EU. UCITS III regulations allow funds to invest in a wider range of financial instruments, including derivatives.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

CREDIT: Credit risk is the risk that the issuer may default. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **LIQUIDITY:** Temporary market distortions may have an impact on the pricing conditions under which the Fund might be caused to liquidate, initiate or modify its positions. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.
