## EM DEBT E EUR ACC

LUXEMBOURG SICAV SUB-FUND

Recommended  
minimum investment  
horizon:

3 YEARS

LU3003216747

Monthly Factsheet - 30/01/2026

### INVESTMENT OBJECTIVE

Carmignac Portfolio EM Debt is an emerging markets fixed income UCITS fund that implements local debt, external debt and currency strategies across emerging markets through a flexible, conviction-driven approach. The Fund promotes environmental and social characteristics and allocates at least 10% of its net assets to sustainable investments. It aims to generate positive and sustainable risk-adjusted returns over a recommended minimum investment horizon of three years, while outperforming its reference indicator.

Fund management analysis can be found on P.3

### PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

#### FUND PERFORMANCE VS. REFERENCE INDICATOR SINCE LAUNCH (Basis 100 - Net of fees)

European regulation requires a minimum one-year share performance to be displayed.

#### CUMULATIVE AND ANNUALIZED PERFORMANCE (as of 30/01/2026 - Net of fees)

European regulation requires a minimum one-year share performance to be displayed.

#### ANNUAL PERFORMANCE (%) (Net of fees)

European regulation requires a minimum one-year share performance to be displayed.

#### STATISTICS (%)

#### PERFORMANCE CONTRIBUTION

European regulation requires a minimum one-year share performance to be displayed.

## FUND MANAGEMENT ANALYSIS

### MARKET ENVIRONMENT

- January saw a renewed rise in geopolitical tensions, with the capture of former Venezuelan president Nicolás Maduro by the United States, pressure from Donald Trump on European partners to gain control of Greenland, and growing US–Iran tensions amid stalled nuclear talks. This backdrop increased market volatility and supported higher commodity prices, especially energy and precious metals.
- In the United States, the Federal Reserve kept its policy rate unchanged at 3.75%, its first pause since July amid sustained growth and inflation remaining above target. Late in the month, President Trump's nomination of Kevin Warsh to the Fed briefly increased market volatility, reflecting concerns over a more hawkish policy stance.
- Rate markets were volatile, with the US 10-year Treasury yield up 7bps over the month, while the German 10-year yield remained stable. Credit markets stayed resilient despite geopolitics, supported by strong technicals, with iTraxx Xover widening only slightly by around 3bps to 247bps.
- Emerging debt remained positive despite a pause in most EM central banks' monetary easing cycles. EM local recorded a sixth straight gain, supported by carry and FX, while hard-currency sovereigns extended their rally for a ninth consecutive month. Performance remained highly dispersed, with strong outperformance in Latin America and South Africa versus weaker results across most of Asia.
- On currencies, emerging market FX benefited from a softer US dollar in January, a move publicly endorsed by President Trump. In a context of renewed geopolitical tensions and a strong rally in commodities, notably oil and precious metals, commodity-producing currencies such as the Brazilian real, the South African rand and the Chilean peso outperformed, while Asian currencies lagged overall.

### PERFORMANCE COMMENTARY

- Over the month, the Fund delivered a positive performance, outperforming its reference indicator, driven by all performance drivers, with local currency debt as the main driver.
- The fund strongly benefited from its local currency debt exposure, driven by our long positions in South African, Colombian, and Polish rates.
- Our exposure to emerging market hard currency debt also contributed positively to performance, notably through our positions in Argentina, Côte d'Ivoire and Ecuador. However, this was partly offset by our positions in Egypt and Turkey.
- On currencies front, the Fund benefited significantly from exposure to commodity-linked currencies such as the Brazilian real, the South African rand and the Chilean peso.

### OUTLOOK AND INVESTMENT STRATEGY

- In a supportive environment for emerging market debt, driven by strong growth, moderating inflation, and solid fundamentals, we expect central banks to maintain an accommodative bias despite persistent geopolitical risks. We therefore keep a relatively high modified duration, around 620 basis points, through a balanced exposure to local and hard-currency bonds.
- With local currency debt offering attractive opportunities amid high real rates and easing inflation, we maintain significant exposure to local markets. Our positioning focuses on countries offering elevated real yields, notably South Africa, Poland, the Czech Republic and Hungary, as well as selected Latin American countries such as Brazil, Colombia and Peru.
- In hard currency sovereign debt, supported by attractive carry, solid technicals, and a favorable macro backdrop, we maintain an overweight exposure to selected high-yield issuers with sound fundamentals and appealing valuations, notably Côte d'Ivoire, Egypt, Turkey and South Africa.
- Credit remains attractive, particularly in the energy and financial sectors. We remain primarily invested in high-yield issuers, especially BB- and B-rated issuers and underweight investment grade credit due to very tight credit spreads. In the context of tight valuations, we continue to have credit protection via the iTraxx Xover.
- We continue to maintain significant exposure to the euro. In a context of a weakening US dollar and rising commodity prices, we also keep meaningful exposure to emerging market currencies, particularly in Latin America and in commodity-producing countries such as the Chilean peso (CLP), the Colombian peso (COP) and the Brazilian real (BRL).

## PORTFOLIO ESG SUMMARY

This financial product is classified Article 8 of the Sustainable Finance Disclosure Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

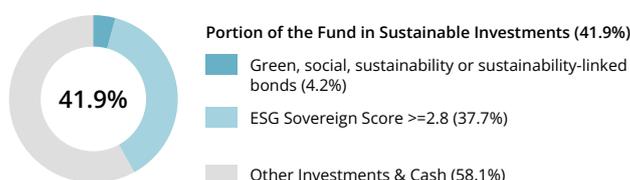

- A minimum of 10% of the Sub-Fund's net assets are invested in emerging market sovereign or quasi sovereign debt issuers within the top quartile of the sustainability score distribution ( $\geq 2.8/5$ ) or green, social, sustainable and sustainability-linked corporate or sovereign bonds;
- Corporate bond Investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 1% of the Sub-Fund's net assets;
- The Sub-Fund will exclude sovereign debt with a score of 2.5/5 or below in the proprietary ESG sovereign model.

### PORTFOLIO ESG COVERAGE

Number of issuers in the portfolio	55
Number of issuers rated	52
Coverage Rate	94.5%

### SUSTAINABLE INVESTMENTS (NET ASSETS)

Our Proprietary **ESG Sovereign Score** identifies ESG related risks and opportunities and integrates them in investment decisions. The approach uses objective data from public sources and qualitative adjustments can be performed to reflect recent events not yet factored into the indicators. Numerical scoring system goes from 1 (Bad) to 5 (Good).

For the assessment of the **Green, Social, Sustainable and Sustainability-Linked-Bonds**, the Bloomberg sustainable debt indicators are used for screening of company debt securities which have self-reported sustainability features. Considerations such as whether the instrument is classified under recognised market standards (International Capital Markets Association or Climate Bond Initiative) or have third party assurance are important to our assessment.

## GLOSSARY

**Alpha:** Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

**Beta:** Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

**Capitalisation:** A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

**Duration:** A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

**High yield:** A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

**Investment grade:** A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

**Investment/net exposure rate:** The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

**Modified duration:** A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

**Net asset value:** Price of all units (in an FCP) or shares (in a SICAV).

**Rating:** The rating measures the creditworthiness of a borrower (bond issuer).

**SFDR Fund Classification:** Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

**SICAV:** Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

**VaR:** Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

**Volatility:** Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

**Yield to Maturity:** Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

## ESG DEFINITIONS & METHODOLOGY

**ESG:** E for Environment, S for Social, G for Governance

**ESG score Calculation:** Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

**Principal Adverse Impacts (PAI):** Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

**Sustainable Investments:** The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**Taxonomy Alignment:** In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: [https://ec.europa.eu/info/sites/default/files/business\\_economy\\_euro/banking\\_and\\_finance/documents/sustainable-finance-taxonomy-faq\\_en.pdf](https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf)

I EUR Acc	—	—	0.77%	0.38%	20%
E EUR Acc	—	—	1.6%	0.38%	20%

(2) Taken under specific conditions.

**Entry costs:** One-time cost you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge. **Exit costs:** We do not charge an exit fee for this product. **Management fees and other administrative or operating costs:** This estimate is based on actual costs over the past year. **Transaction costs:** This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell. **Performance fees:** when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

## MAIN RISKS OF THE FUND

**EMERGING MARKETS:** Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **CREDIT:** Credit risk is the risk that the issuer may default.

The Fund presents a risk of loss of capital.
