LUXEMBOURG SICAV SUB-FUND

Recommended
minimum investment
horizon:

5 YEARS

LU0992632025

Monthly Factsheet - 29/11/2024

INVESTMENT OBJECTIVE

Flexible multi-asset emerging market fund combining three performance drivers: emerging equities, bonds and currencies. With the ability to adjust the net equity exposure up to 50% and the modified duration [-4 ;+10], the Fund seeks to benefit from market upturns while limiting drawdowns. The fund adopts a sustainable, responsible approach, favouring countries and companies that deliver solutions to environmental and social challenges, consistently taking into account ESG criteria. The Fund aims to outperform its reference indicator over a recommended investment horizon of 5 years.

Fund management analysis can be found on P.3

PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- Over the month of November, markets took note of the new US President, Donald Trump, with a landslide victory for the Republican party bringing a wind of volatility to stock markets and dragging emerging assets into negative territory.
- Despite an environment of strong growth and resurgent inflation, yields fell on both sides of the Atlantic this month, as did the US 10-year (-12bp) and the German 10-year (-30bp), notably following the election of Scott Bessent as future US Treasury Secretary.
- On the central bankers' front, we can point to a second US rate cut of -25bp despite stagnating inflation at +2.6% year-on-year and +3.3% on the underlying component of consumer price indices.
- Against this backdrop, emerging-market assets were mixed: EM equities and local debt (in local currency) fell back, while EM external bonds (hard currency) performed well.
- Over the month, Latin American markets were particularly weak, penalized by the weakness of Brazilian assets in the wake of budget announcements that disappointed investors, with a spending cut of BRL 70 billion over the next two years (0.3% of GDP per annum), against BRL 40-70 billion in lost tax revenues due to income tax exemptions.
- On the currency front, the US dollar continued to strengthen following Trump's victory in the US elections, weighing on emerging market currencies.

PERFORMANCE COMMENTARY

- Against this backdrop, the fund posted a negative, underperforming its reference indicator.
- Against a backdrop of generally easing interest rates, the Fund benefited from the good performance of its bond investments, but suffered from its equities investments.
- On the interest-rate front, our positions in US debt and our exposure to certain emerging-market debt, such as South Africa, Mexico and Poland, had a positive impact.
- On the credit side, our selection of emerging market external debt, notably Argentina and Egypt, had a positive impact, slightly offset by our protective measures aimed at reducing our exposure to this market.
- On the equities front, we suffered from the weakness of our Brazilian and Chinese stocks.
- Finally, on the currency front, we benefited from our exposure to the US dollar, which we strengthened over the period, while our position in the Brazilian real and the Indonesian rupiah had a negative impact.

OUTLOOK AND INVESTMENT STRATEGY

- Against a backdrop of a soft landing, with the US economy remaining resilient and inflation continuing its gradual decline, central banks are likely to maintain their accommodative policies. We remain constructive on emerging markets and maintain a moderate level of modified duration, at around 5 at the end of the period.
- On the other hand, we believe that D. Trump's policies could be a source of volatility for emerging markets. This is why we have reduced the portfolio's overall risk, by reducing our allocation to certain EM currencies and local debt, and by lowering our exposure to equities.
- On the fixed-income side, we are concentrating on the debt of countries where central banks are lagging the cycle, such as Mexico, Poland and Indonesia. In addition, following D. Trump's election, we have increased our exposure to US inflation linkers.
- On the external EM debt front, we continue to favor special situations in countries whose economies are in the process of restructuring or improving significantly (Ivory Coast) and those which we feel are less vulnerable to the volatility linked to the US election, such as Argentina.
- On credit, we are maintaining our positive, albeit cautious, bias due to high valuations, and are maintaining a substantial level of hedging on Itraxx Xover to protect the portfolio from the risk of widening spreads.
- On the equities side, we are also maintaining a cautious overall positioning, with a moderate allocation to China and a balanced exposure, combining high-visibility quality stocks (Asian Tech, India) with companies in less attractive markets but with attractive valuations. Over the period, we increased our exposure to India, by participating to the IPO of Swiggy, India's leading online food delivery company.
- Lastly, with regard to currencies, we increased our exposure to the US dollar following D. Trump's election, and we retain limited exposure to emerging market currencies. However, we are diversifying our exposure to less accommodative central bank currencies with high carry, such as the Brazilian real, the South African rand and the Hungarian forint.

PORTFOLIO ESG SUMMARY

This financial product is classified as an Article 8 fund under the EU's Sustainable Financial Disclosures Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Sub-Fund's net assets are invested in sustainable investments aligned positively with the United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund's net assets;
- The equity and corporate bond investment universe is actively reduced by at least 20%;
- ESG analysis applied to at least 90% of issuers.

ALIGNMENT WITH THE UN SUSTAINABLE DEVELOPMENT GOALS (NET ASSETS)

United Nations Sustainable Development Goals (SDGs)

SDG alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company's policies, practices and targets addressing such SDGs.

To find out more about the United Nations Sustainable Development Goals, please visit <https://sdgs.un.org/goals>.

GLOSSARY

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

SFDR Articles - Fund Classification: Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **EMERGING MARKETS:** Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest.

The Fund presents a risk of loss of capital.
