

CARMIGNAC EMERGENTS A EUR YDIS

FRENCH MUTUAL FUND (FCP)

Recommended
minimum investment
horizon:

5 YEARS

FR0011269349

Monthly Factsheet - 30/04/2025

INVESTMENT OBJECTIVE

Emerging market equity fund combining a fundamental top-down approach with a disciplined bottom-up analysis in order to identify the attractive opportunities within the emerging universe. The fund adopts a sustainable, responsible approach, favouring countries and companies offering long-term growth potential, that deliver solutions to environmental and social challenges and that derive major part of their revenues from goods and services related to business activities which align positively with United Nations Sustainable Development Goals. The Fund aims to outperform its reference indicator over a recommended investment horizon of 5 years, while achieving its sustainability objective, consistently taking into account ESG criteria.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- In April, markets experienced significant volatility in the wake of the announcement of higher-than-expected US tariffs, leading to a correction in developed and emerging equity markets.
- However, emerging markets held up better than their developed counterparts, helped in particular by the resilience of Latin American markets.
- Tensions between China and the United States intensified (145% tariffs on Chinese products and 125% tariffs on US products) before easing at the end of the period, with talks between the two countries getting underway.
- Xi Jinping visited Malaysia, Cambodia and Vietnam, where he signed a number of trade agreements aimed at strengthening cooperation in the region.
- On the macroeconomic front, Chinese GDP growth reached 5.4%, above economists' average forecast of 5.2%, thanks to a surge in exports ahead of the announcement of tariffs. At the end of the period, the Chinese authorities announced further measures to support the Chinese economy (particularly consumers), but these were not enough to revive the Chinese markets, which ended the month in negative territory.
- With 26% tariffs, India seems to be coming out on top. Indian markets showed resilience, buoyed by hopes of a bilateral agreement between India and the United States following JD Vance's visit to India.

PERFORMANCE COMMENTARY

- In April, the fund posted a negative performance but still outperformed its reference indicator.
- Against a backdrop of higher-than-expected tariffs, we suffered from the decline in our Asian investments, particularly in China, South Korea and Taiwan.
- In China, we suffered from the weakness of our consumer and internet stocks VIPSHOP, JD.Com and Didi. Despite their solid fundamentals, these stocks were penalised by heightened geopolitical tensions between China and the United States, leading to a correction in Chinese equities listed in the United States.
- We also suffered from the weakness of our Taiwanese stocks (TSMC, Elite Material), which were impacted by the sharp correction in US technology stocks.
- On the other hand, the Fund showed resilience, benefiting from its significant exposure to Latin America and the excellent performance of its Mexican stocks (Banorte, Vesta) and Brazilian stocks (Eletrobras, Mercadolibre, Equitorial).

OUTLOOK AND INVESTMENT STRATEGY

- Despite the uncertainties surrounding Donald Trump's policies, we remain constructive on emerging market equities, as we believe that current valuations reflect a pessimistic scenario.
- Furthermore, emerging markets are benefiting from uncertainty in the United States, as Trump's policies seem to be having the opposite effect, benefiting emerging markets.
- We remain constructive on China, given the change in perception. Markets are realising that geopolitical tensions are hurting China but not destroying it.
- Moreover, technological progress, particularly in AI and productivity, should provide further stimulus to the economy. This is why we want to maintain decent exposure to China, with a slight underweight. Our Chinese portfolio is mainly composed of technology/innovative companies.
- During the month, we initiated a new position in Prosus, Tencent's parent company. We believe Tencent is well positioned to benefit from China's catch-up in AI and could potentially launch the world's first AI agents or assistants.
- We are maintaining a significant allocation to India, where the long-term outlook remains promising (strong growth, political stability, solid current account balance).
- The recent correction offers attractive entry points for the stocks we are tracking. We took advantage of the correction at the beginning of the year to increase our exposure to India by strengthening our positions in the e-commerce, tech and insurance sectors, which have fallen sharply.
- Finally, we remain very constructive on our Latin American portfolio, which appears to be benefiting from the new global economic order, as it is less affected by customs tariffs than Asia.
- Mexico seems to have been relatively spared by Trump's initial announcements, which reinforces our view that this country should gain significant market share in US imports.

PORTFOLIO ESG SUMMARY

This financial product is classified as an Article 9 fund under the EU's Sustainable Financial Disclosures Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain the sustainable investment objective promoted by this financial product are :

- A minimum of 80% of the Fund's net assets are invested in sustainable investments aligned positively with the United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 5% and 35% of the Sub-Fund's net assets;
- Equity investment universe is actively reduced by at least 25%;
- The universe is further reduced by the number of companies deemed not aligned according to our SDG alignment assessment;
- ESG analysis applied to at least 90% of issuers;
- 50% of carbon emissions lower than the reference indicator as measured by carbon intensity.

ALIGNMENT WITH THE UN SUSTAINABLE DEVELOPMENT GOALS (NET ASSETS)

United Nations Sustainable Development Goals (SDGs)

SDG alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company's policies, practices and targets addressing such SDGs.

To find out more about the United Nations Sustainable Development Goals, please visit <https://sdgs.un.org/goals>.

CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: MSCI, 30/04/2025. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emissions figures are based on MSCI data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO₂ is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

* Reference Indicator: MSCI EM NR index. The reference to a ranking or prize, is no guarantee of the future results of the UCIS or the manager. For more information regarding product disclosure, please refer to the Sustainability-related Disclosures in accordance with Article 10 available on the Fund's webpage.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Active share: Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Bottom up investing: Investment based on analysis of individual companies, whereby that company's history, management, and potential are considered more important than general market or sector trends (as opposed to top down investing).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

FCP: Fonds commun de placement (French common fund).

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

Top-down investing: An investment strategy which finds the best sectors or industries to invest in, based on analysis of the corporate sector as a whole and general economic trends (as opposed to bottom up investing).

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

MSCI methodology: MSCI uses company disclosed emissions where available. In the instance these are not available, they use their proprietary model to estimate emissions. The model has three distinct modules, production model (used for power-generating utilities), company-specific intensity model (used for companies that have reported carbon emissions data in the past but not for all years), & industry segment-specific intensity model (used for companies that have not reported any carbon emissions data in the past). For further information, please visit MSCI's latest "Climate Change Metrics Methodology" document.

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) max. of the outperformance once performance since the start of the year exceeds that of the reference indicator and if no past underperformance still needs to be offset. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

EMERGING MARKETS: Operating conditions and supervision in "emerging" markets may deviate from the standards prevailing on the large international exchanges and have an impact on prices of listed instruments in which the Fund may invest. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **DISCRETIONARY MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.
