Monthly Factsheet - 29/08/2025

INVESTMENT OBJECTIVE

European mixed fund with at least 40% of its assets permanently invested in fixed income, and a net equity exposure that can vary up to 50%. The Fund seeks to identify attractive sources of return in Europe while mitigating capital fluctuations, thanks to its bottom-up driven investment process and its flexible, active management. The Fund aims to outperform its reference indicator over 3 years minimum while implementing a socially responsible investment approach.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- Global markets posted strong gains in USD terms, with both equities and bonds advancing. However, the weaker dollar against the euro translated into negative performance in euro terms.
- US labour market data signalled a slowdown, prompting Fed Chair Jerome Powell at Jackson Hole to hint at possible rate cuts. Markets are now pricing in a 25 bps reduction in September.
- Political tensions in the US intensified as President Trump dismissed the head of the BLS and moved to oust Fed Governor Lisa Cook, raising concerns about central bank independence.
- The US yield curve steepened, with long-end yields climbing on worries about Fed independence.
- In Europe, political risk re-emerged as the French Prime Minister faced a no-confidence vote. France remains a fiscal outlier within the Eurozone, amplifying investor unease.
- Eurozone yields moved higher, supported by improved growth sentiment, while July inflation data was broadly in line with expectations.
- Global equities hit new highs, buoyed by reduced tariff-related noise following the 1 August deadline, stronger US GDP growth, and rising expectations of Fed rate cuts in September.
- The AI trade maintained strong momentum, with Nvidia reaching new all-time highs after robust results.
- Trade tensions lingered as the US raised tariffs, including a 50% levy on Russian oil imports via India. Commodity markets diverged: oil and gas prices declined, while gold rallied.

PERFORMANCE COMMENTARY

- The fund delivered a positive performance over the month but remained below its reference indicator.
- Stock selection continued to weigh on relative performance, particularly due to the underperformance of Alcon, Argenx, and Schneider Electric.
- Year-to-date underperformance is mainly explained by the relative weakness of our long-term convictions, affected by the decline of the quality style in Europe.
- On the fixed income side, we offset the rise in European yields thanks to reduced bond sensitivity, our inflation-linked positions, and our credit exposure.
- Our diversification tools also contributed, particularly through our exposure to gold, silver, and currencies.

OUTLOOK AND INVESTMENT STRATEGY

- European growth is expected to remain weak in the near term, with a cyclical rebound likely only in late 2025 / 2026, supported by easing policy uncertainty, improving credit flows, and German fiscal stimulus.
- Disinflation should continue into year-end as base effects fade and wage pressures ease.
- Market expectations are no longer dovish; the yield curve is already pricing in hikes by late 2026. The asymmetry lies in the ECB's stance: it will cut rates if necessary. Preference remains cautious on the long end.
- Inflation-linked strategies look attractive, with real rates at decade highs.
- We remain constructive on equities, with high exposure supported by the current environment.
- Quality names offer attractive valuations, with opportunities in companies tied to long-term themes such as electrification and reindustrialisation. Allocation to banks has been reinforced, underpinned by strong fundamentals.
- Credit spreads appear expensive and also provide a good hedge against equities, but carry remains appealing and dispersion offers alpha potential.

PORTFOLIO ESG SUMMARY

This financial product is classified as an Article 8 fund under the EU's Sustainable Financial Disclosures Regulation ("SFDR"). The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product are :

- A minimum of 10% of the Sub-Fund's net assets are invested in sustainable investments aligned positively with the United Nations Sustainable Development Goals;
- The minimum levels of sustainable investments with environmental and social objectives are respectively 1% and 3% of the Sub-Fund's net assets;
- The equity and corporate bond investment universe is actively reduced by at least 25%;
- ESG analysis applied to at least 90% of issuers,
- 30% of carbon emissions lower than the reference indicator as measured by carbon intensity.

ESG SCORE

Carmignac Portfolio Patrimoine Europe A EUR Minc AA

Source: MSCI ESG

ALIGNMENT WITH THE UN SUSTAINABLE DEVELOPMENT GOALS (NET ASSETS)

United Nations Sustainable Development Goals (SDGs)

SDG alignment is defined for each investment by meeting at least one of the following three thresholds.

1. Company derives at least 50% of its revenue from goods and services that are related to one of the following nine SDGs: (1) No Poverty, (2) No Hunger, (3) Good Health and Well Being, (4) Quality Education, (6) Clean Water, (7) Affordable and Clean Energy, (9) Industry, Innovation and Infrastructure, (11) Sustainable Cities and Communities, (12) Responsible Consumption and Production.
2. Company invests at least 30% of its capital expenditure in business activities that are related to one of the aforementioned nine SDGs.
3. Company achieves aligned status for operational alignment for at least three out of all seventeen of the SDGs and does not achieve misalignment for any SDG. Evidence is provided by the investee company's policies, practices and targets addressing such SDGs.

To find out more about the United Nations Sustainable Development Goals, please visit <https://sdgs.un.org/goals>.

MSCI ESG SCORE PORTFOLIO

Source: MSCI ESG Score. ESG Leaders represent companies rated AAA and AA by MSCI. ESG Average represent companies rated A, BBB, and BB by MSCI. ESG Laggards represent companies rated B and CCC by MSCI. Portfolio ESG Coverage: 84.7%

CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: MSCI, 29/08/2025. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

TOP 5 ESG RATED PORTFOLIO HOLDINGS

Company	Weight	ESG Rating
IBERDROLA INTERNATIONAL BV	7.2%	AAA
KBC GROUP NV	1.2%	AAA
FINNAIR PLC	0.4%	AAA
NATWEST MARKETS NV	2.0%	AA
LLOYDS BANKING GROUP PLC	1.1%	AA

Source: MSCI ESG

Carbon emissions figures are based on MSCI data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO₂ is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

* Reference Indicator: 40% MSCI Europe NR index + 40% ICE BofA All Maturity All Euro Government index + 20% ESTR capitalized index. Quarterly Rebalanced. Equity and corporate bond components of the fund portfolio are used for this analysis. The reference to a ranking or prize, is no guarantee of the future results of the UCIS or the manager. GLOSSARY

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

SFDR Articles - Fund Classification: Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

Variable Management Charge: 20% of the outperformance once performance since the start of the year exceeds that of the reference indicator and if no past underperformance still needs to be offset.

(1) We do not charge an entry fee.

(2) We do not charge an exit fee for this product.

(3) Ongoing charges are based on the expenses for the last financial year ended. They may vary from year to year and do not include performance fees or transaction costs.

(4) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **CREDIT:** Credit risk is the risk that the issuer may default.

The Fund presents a risk of loss of capital.
