

CARMIGNAC PORTFOLIO INFLATION SOLUTION F EUR ACC

LUXEMBOURG SICAV SUB-FUND

Recommended
minimum investment
horizon:

5 YEARS

LU2715954330

Monthly Factsheet - 31/07/2025

INVESTMENT OBJECTIVE

This Sub-Fund is an actively managed UCITS. It seeks to achieve total return, targeted to be above Eurozone inflation over the recommended investment period of more than five (5) years, through capital growth, income and relative-value trades. To reach this objective, the fund will invest in a wide range of traditional assets (e.g. equities, bonds, money markets and currencies) and in some inflation-sensitive assets (e.g. commodities such as gold and copper and inflation-linked instruments).

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- The US economy remains resilient, with growth expanding by 0.7% qoq in the second quarter—slightly above expectations. US CPI inflation also increased in June, with the core rate moving closer to 3% year-on-year.
- In contrast, eurozone growth was more moderate, rising by 0.1% quarter-on-quarter in the second quarter. Headline inflation in the eurozone edged up to the target of 2% year-on-year in June.
- The Fed has kept rates on hold—despite continued pressure from Trump—while the ECB has also opted to pause.
- The announcement of new US trade agreements with major partners including Japan and the EU, as well as the passage of the One Big Beautiful Bill Act, provided increased policy clarity.
- Risk assets responded positively. US stocks outperformed once again, with significant gains among leading AI-related companies.
- US Treasury yields rose in July, reflecting both a more optimistic growth outlook and increased market concerns about the fiscal situation.
- Eurozone government bond yields also drifted higher due to generally positive growth sentiment.
- The US dollar strengthened in July—its first monthly gain of 2025—driven by robust US economic data, consistent Fed messaging, and a reversal in previously bearish market positions.

PERFORMANCE COMMENTARY

- Over the month, the fund delivered a positive performance, outperforming its reference indicator.
- Our positioning in global equity markets paid off, both in developed and emerging countries, particularly in China.
- Our strategy focused on the inflation theme also contributed positively to the fund's performance during the period.
- As a result, this positioning enabled us to deliver a strong return of +11.7%, compared to +1.3% for the reference indicator.

OUTLOOK AND INVESTMENT STRATEGY

- We believe that upcoming US inflation reports will mark the beginning of a new upward inflection. While we do not expect this to have a significant initial impact on inflation expectations—since it is largely anticipated—we are nonetheless positioned to benefit from it, should it materialize. This is in line with our mandate to deliver performance that outpaces inflation.
- Over the longer term, we continue to observe growing signs of a major rotation away from the United States toward the rest of the world. The most recent example: the rise in the US equity market over the past quarter was driven solely by domestic investors.
- Carmignac P. Inflation Solution is strategically positioned for this unfolding rotation, which could be significantly accelerated by the onset of a second wave of inflation.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

DISCRETIONARY MANAGEMENT: Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected. **RISK OF CAPITAL LOSS:** The portfolio does not guarantee or protect the capital invested. Capital loss occurs when a unit is sold at a lower price than that paid at the time of purchase. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates.

The Fund presents a risk of loss of capital.
