

CARMIGNAC MULTI EXPERTISE A EUR ACC

FRENCH MUTUAL FUND (FCP)

Recommended
minimum investment
horizon:

3 YEARS

FR0010149203

Monthly Factsheet - 30/06/2025

INVESTMENT OBJECTIVE

A balanced multi-asset strategy investing in equity, bond and alternative Carmignac Funds, while considering a responsible investment approach. The Fund's objective is to outperform its reference indicator over a recommended investment period of at least three years.

Fund management analysis can be found on P.3

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- In June, risky assets rebounded—particularly in the US—despite mixed economic indicators and persistent geopolitical tensions.
- Tensions with Iran briefly pushed oil prices higher, but equity markets remained resilient, focusing instead on US budgetary and trade deals.
- Wall Street outperformed other developed markets, driven by the technology sector, but was ultimately outpaced by emerging markets, which benefited from a weaker dollar.
- Ongoing concerns over the US deficit, declining consumption, repatriation flows from foreign investors, and increased currency hedging continued to weigh on the dollar.
- On the interest rate front, US Treasury yields declined across the curve, while German yields rose following the adoption of a record investment plan aimed at revitalizing Europe's largest economy.
- The Fed kept rates unchanged but revised its inflation forecasts upward, while the ECB eased monetary policy by 25 basis points but remained vigilant regarding inflationary risks.

PERFORMANCE COMMENTARY

- Over the month, the fund delivered a positive performance, also outperforming its reference indicator.
- Our portfolio benefited from its equity, fixed-income and alternative fund selection.

OUTLOOK AND INVESTMENT STRATEGY

- We remain broadly positive; the stabilization of the situation in the Middle East encourages us to maintain significant exposure to equity markets.
- We are optimistic about global growth prospects, both in the US and Europe.
- Recent investment announcements in Germany are expected to provide an additional boost to European growth over the next two years.
- We are maintaining our fund portfolio unchanged.
- In equities, we are invested in the Carmignac Portfolio Investissement and Carmignac Portfolio Grandchildren funds.
- In fixed income, we are invested in the Carmignac Portfolio Credit and Carmignac Portfolio Global Bond strategies.
- Finally, in our alternative portfolio, we hold positions in the Carmignac Absolute Return Europe and Carmignac Portfolio Merger Arbitrage Plus funds.

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund “cushions” the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund “magnifies” the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

FCP: Fonds commun de placement (French common fund).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, “Article 8” funds promote environmental and social characteristics, “Article 9” funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, “Article 6” funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity (YTM) is the estimated annual rate of return expected on a bond if held until maturity and assuming all payments made as scheduled and reinvested at this rate. For perpetual bonds, the next call date is used for computation. Note that the yield shown does not take into account the FX carry and fees and expenses of the portfolio. The portfolio's YTM is the weighted average individual bonds holdings' YTM within the portfolio.

CHARACTERISTICS

Share Class	Date of 1st NAV	Bloomberg	ISIN	Management Fee	Entry costs ⁽¹⁾	Exit costs ⁽²⁾	Management fees and other administrative or operating costs ⁽³⁾	Transaction costs ⁽⁴⁾	Performance fees ⁽⁵⁾	Minimum Initial Subscription ⁽⁶⁾
A EUR Acc	02/01/2002	CARREAC FP	FR0010149203	Max. 1.5%	Max. 4%	—	1.57%	0.64%	20%	—

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) max. of the outperformance once performance since the start of the year exceeds that of the reference indicator and if no past underperformance still needs to be offset. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments.

The Fund presents a risk of loss of capital.
