

FP CARMIGNAC GLOBAL EQUITY COMPOUNDERS B GBP INC

OEIC

Recommended minimum investment horizon:

5 YEARS

GB00BNDQ7Q03

Monthly Factsheet - 30/04/2025

INVESTMENT OBJECTIVE

An international equity strategy seeking to achieve capital growth over a period of at least five years by investing in high-quality companies, "compounders" that reinvest their profits to grow the business for the future. The investment process is based on a quantitative screening, a rigorous fundamental analysis and a socially responsible approach, the latter playing a key role in identifying profitable firms with long-term growth prospects.

Fund management analysis can be found on P.3

PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

- April 2025 was characterized by notable volatility in the financial markets, marked by a sharp correction followed by an equivalent rebound, resulting in relatively minor final variations.
- The month commenced with an announcement from Donald Trump concerning higher tariffs than the markets had anticipated. This "Liberation Day," as the US president termed it, created recession fears among investors, triggering a crisis of confidence and causing a flight from risky assets and US assets, including the dollar and Treasury bonds.
- In response to the sharp market downturn, Trump suspended most of the tariff measures for 90 days, excluding China, which allowed equities to rebound.
- European and emerging market equities continued to outperform their US counterparts. Gold was the standout winner of the month, in stark contrast to oil, which experienced a significant decline.
- On the macroeconomic front, uncertainty surrounding trade barriers began to negatively impact leading US activity indicators, such as consumer sentiment.
- The earnings season started robustly, yet companies expressed caution about the future due to ongoing tariff-related uncertainties.

PERFORMANCE COMMENTARY

- In April, the Fund experienced a negative absolute performance, although it outperformed its benchmark.
- This outperformance was primarily driven by our active management and strategic stock selection in the Consumer sector.
- The main detractors for the month were stocks in the Healthcare and Consumer Discretionary sectors.
- Thermo Fisher was the most significant detractor, as the newly imposed tariffs increased the costs of parts and subassemblies sourced from China, thereby affecting the company's margins.
- Similar to Thermo Fisher, Amazon also felt the impact of tariffs, particularly those related to U.S.-China trade, which increased its operational costs and affected profitability.
- Our exposure to the Industrials and Technology sectors contributed positively to our relative performance.
- ServiceNow surged over 10% after reporting impressive financial results for the first quarter of 2025, with subscription revenues rising by nearly 20%.
- In the Industrials sector, Comfort Systems demonstrated strong performance following their report of an increased backlog, indicating robust future demand and a healthy pipeline of projects.

OUTLOOK AND INVESTMENT STRATEGY

- Our macroeconomic framework continues to advocate for a defensive approach to equity markets.
- During the month, we made some adjustments to our portfolio by initiating a new position in the Fund.
- We started positions in Unilever, a British multinational consumer goods company known for its wide range of food, personal care, and household products which is expected to perform well in uncertain market conditions.
- Amid the market downturn in the beginning of April, we reinforced positions that suffered the most, such as Nvidia as their valuations appear highly attractive and they continue to have massive demand from tech giants.
- Additionally, we increased our position in Servicenow prior to their earnings.
- We continued to build our positions in the two US drug distributors, Cencora and McKesson, which we initiated last month and have shown consistent growth.

GLOSSARY

Active Management: An investment management approach where a manager aims to beat the market through research, analysis and their own judgement.

Active share: Portfolio active share measures how different from the reference indicator the portfolio is. The closer the active share is to 100%, the less identical stocks a portfolio has compared to its reference indicator, thus the more active the portfolio manager is compared to the market.

Active Weight: Represents the absolute value of the difference between the weight of a holding in the manager's portfolio and the same holding in the benchmark index.

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2023. <https://www.msci.com/documents/1296102/34424357/MSCI+ESG+Fund+Ratings+Methodology.pdf>

MSCI methodology: MSCI uses company disclosed emissions where available. In the instance these are not available, they use their proprietary model to estimate emissions. The model has three distinct modules, production model (used for power-generating utilities), company-specific intensity model (used for companies that have reported carbon emissions data in the past but not for all years), & industry segment-specific intensity model (used for companies that have not reported any carbon emissions data in the past). For further information, please visit MSCI's latest "Climate Change Metrics Methodology" document.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

(1) We do not charge an entry fee.

(2) We do not charge an exit fee for this product.

(3) Ongoing charges are based on the expenses for the last financial year ended. They may vary from year to year and do not include performance fees or transaction costs.

(4) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

EQUITY: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.
LIQUIDITY: Temporary market distortions may have an impact on the pricing conditions under which the Fund might be caused to liquidate, initiate or modify its positions.
DISCRETIONARY MANAGEMENT: Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

The Fund presents a risk of loss of capital.
